DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to a bag system including a collection machine and a three way connector, classified in class 604, subclass 6.01.
 - II. Claims 16-20, drawn to a collection machine having a peristaltic pump and a placement device with a groove, classified in class 604, subclass 6.11.
2. The inventions are distinct, each from the other because:
3. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different effects.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
5. A telephone call was made to Paul Morico on May 19, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.
